

HTMLPrint.ini changes are not working

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

In alepcom\tab\alephcom.ini [Print] stanza I have set the NewPrintType=Y. I have made changes to alephcom\bin\HTMLPrint.ini (to the header, footer and margins) but the changes do not appear on the printouts.

Resolution:

If you use the print button after previewing you are not using HTMLPrint and thus any changes you have made in the HTMLPrint.ini will not take effect. If you change your Print Configuration from Preview to Normal Printing and then print, then the options set in HTMLPrint will be in effect.
