

PDS institute from item request not appearing via variable

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We have the default institute defined in USM01 \$data_tab/tab100 as follows:

DEFAULT-BOR-LIBRARY=USM50

Still when we try to make an item request via web OPAC (without indentifying first) we see that the institute is missing from the URL that is being sent to PDS. This was supposed to be filled by the variable \$0200 in www_f_eng/pds-login.

Resolution:

Aleph development recommends to add the paramter DEFAULT-BOR-LIBRARY to the \$alephe_tab/tab100 (especially for a single ADM system).

Additional Information

PDS, "item request", DEFAULT-BOR-LIBRARY
