## ARC 1.1 ETL fails after installing rep change 1324

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We are running ARC 1.1 and have installed v.18 rep change 1324. When we run the ARC ETL process (p\_arc\_01) through the batch queue, we get this error:

```
ARC_VERSION = 2.0  
Now checking license permission  
There is NO valid ARC license  
**** Aborting ****
```

Why is this happening and what can we do about it?

### Resolution:

Rep change 1324 added this line to the prof\_library file for library, USM50:

```
setenv ARC_VERSION 2.0
```

When aleph\_startup starts the batch queues, prof\_library is sourced for each library before its queue is started. Since USM50 is started before ABC50, and ARC\_VERSION isn't set in ABC50's prof\_library, the setting for USM50 remained in effect when the ABC50 queue was started. Adding ARC\_VERSION to aleph\_start (as suggested by KB 8192-8903 for ARC 2.0 users) doesn't help, since the USM50 prof\_library is sourced after aleph\_start. Adding ARC\_VERSION to ABC50's prof\_library fixed the problem.

Thanks to Timothy Prettyman of the University of Michigan for diagnosing and resolving this problem.
