Description:

Is it possible to enter text by its Unicode values in the Search query fields?

Resolution:

In Search query fields, you can activate a special mode which enables you to enter text by its Unicode values. The F11 shortcut key allows you to toggle between regular and Unicode entry mode. This parallels the way it functions in the Catalog Editor window. The message Unicode Mode is displayed in the operations bar.

Additional Information

Unicode, search, query, F11
