

## PC Timeout for online heading correction

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

When trying to correct a heading, the process eventually timed out with the message:

"Remote Service Error (c1029 get 98)  
Server failed to execute request after 200 seconds".

Is it possible for us to increase this timeout?

### Resolution:

Pc\_server time out error is received when trying to Correct heading with more than 1500 attached docs (or about that). Please use p-manage-21 (Global changes) to correct such headings.

Headings that have "++" in the Docs line have more than 900 records attached. This can be an indication to avoid correcting them online, but rather use the batch job.

manage\_21

---

## Additional Information

timeout, correct heading, p\_manage\_21
