## Bib info missing from particular overdue notice

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

In the output of a particular overdue notice from 6/26 there is no title.

The following information appears in the \$data\_print report file for this item, showing that the title info exists:

```
<z13-title-code>2451</z13-title-code>  
<z13-title>Greek Philosophy Thales to Aristotle</z13-title>  
<z30-doc-number>10036957</z30-doc-number>
```

### Resolution:

Looking at the \$data\_print report file, we see that the "<bib-info>" line is empty for this item:

```
<bib-info></bib-info>
```

while it is populated for other items.

The "<bib-info>" lines in the ./abc01/form\_eng/overdue-summary.xsl form are built by the ./form\_fill/overdue\_summary\_xml program, which calls the get\_bib\_line\_x program. This program reads the "overdue-summary" lines in the ./abc50/tab/bib\_format table. In this case, we see these lines:

```
overdue-summary 800  
overdue-summary-00 111  
overdue-summary-01 111  
overdue-summary-02 111  
overdue-summary-03 111  
overdue-summary-04 111
```

In the case of an item connected to the abc01 bib library, the program will look at the ./abc01/tab/edit\_paragraph.eng.

In the case of an item connected to the abc30 Course Reserve library, the program will look at the ./abc30/tab/edit\_paragraph.eng.

While the abc01 edit\_paragraph.eng has lines with 800 and 111 labels:

```
!* Author-Title for Bib Inf on BILL$Items
```

```
800 1##### D ^:^  
800 245### 9 .
```

the abc30 edit\_paragraph.eng has no such lines.

We see (in util f/3/12) that this item is connected to the abc30 library.

The solution is to add 800 and 111 lines to the abc30 edit\_paragraph.eng.
