- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

In version 18 of the Aleph software, when a user of the web opac clicks on the link to go to the full record of a title, it uses the full-set-head-nobor file if the user is not logged in, and the full-set-head-bor file if the user is logged in. Currently on our version 20 server, if the user is not logged in it uses the full-set-head-ill-nobor file and if the user is logged in it tries to load an unknown file it can't find on the server.

Resolution:

You missed a manual adjustment when you upgraded to version 20.

The need to rename files is documented in the ALEPH VERSION 19.01 [Upgrade Express 18.01 to 19.01 User Guide](#) on pages 56 and 57. It is an intentional design change so that sites using ILL only have to maintain one set of files rather than two. For non-ILL sites the only change is in the filename.

Also remember that if you have any references specifically to full-set-head-bor or full-set-head-nobor in you www_f_eng or www_f_fre files you'll want to update those references as well.
