  - **Product Version:** 19.01
- 

### Description:

Changing configuration files and have lost the year from the WebOPAC brief view display.

### Resolution:

Program `expand_doc_merge_union` creates a merged display of the preferred record and all its equivalents..

In order to have expanded fields taken into the merged display, a new section must be added to the `tab_expand` table: "PRE-MERGE". The expand programs that create the fields that should appear in the merged display must be listed under this section..

`tab_expand` didn't have PRE-MERGE list, and WEB-BRIEF list had:

WEB-BRIEF `expand_doc_yr 008,260# #c.`

WEB-BRIEF `expand_doc_type tab_type_config.eng.`

WEB-BRIEF `expand_doc_merge_union.`

WEB-BRIEF `expand_doc_cdl_location.`

So "YR" is not taken to the merged display fields..

To have the "YR" field displayed in the merged display, either:

the `tab_expand` table must have the `expand_doc_yr` under the "PRE-MERGE" section:

PRE-MERGE `expand_doc_yr 008,260# #c.`

or another solution is to put the line:

WEB-BRIEF `expand_doc_yr 008,260# #c.`

to the last line in the WEB-BRIEF list in `tab_expand`.

It works for 'YR', but may not for other expanded fields.
