 - **Product Version:** 18.01
-

Description:

What does the error message "Missing program serial2_find_sici - search code sici" mean?

Description: We are configuring Aleph to scan SICI barcodes on periodicals, but are getting the error message, attached. What does it mean?

On our server we have:

xxx50/tab/pc_tab_exp_field.eng contains the following:

```
SERIAL-SEARCH L SICI SICI
```

xxx01/tab/tab11_ind contains the following:

```
0244# SIC a
```

```
0244# SIC z
```

Resolution:

The problem is that the value in column 4 should be SICI2:

```
SERIAL-SEARCH L SICI SICI2
```

The executable is serial2_find_sici2. Changing the code in column 4 should invoke the call to the correct routine.

Note: If you look at the example in USM50, you'll see the correct form - SICI2.
