

## pushing out .ini file changes with version check in v20

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

As for version check, we need to make some changes to Alephcom.ini and Font.ini. So on our test server I copied the files from my PC to the server so I could test pushing them out using version check. They are pushed out fine but when looking at the files on my PC in Notepad (which what I always use), the formatting is all messed up. How can we push the files out and keep the same formatting so that we can view the files in Notepad?

### Resolution:

[from site:] I found how to push out the .ini files correctly. I just needed to convert the file on the server from unix to windows using the unix2dos command. So we are all set with this.
