

## Preventing job\_daemon to start jobs during a period of time

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We would like to prevent job\_daemon to start any job during our vacations as we do not want to print overdue notices. Therefore we have commented out all lines in job\_list.conf. Unfortunately now all jobs have been started on sunday, We have expected that no job is started.

### Resolution:

The jobs that should be started reguarly are defined in file job\_list (UTIL E 16 1). The file job\_list.conf (UTIL E 16 5) specifies the exact times when these job should be started. If you use a code in job\_list, that is not specified in job\_list.conf. the system assumes that you want to execute the job once a week (on sunday).

Therefore if you want to prevent job\_daemon to start jobs we strongly recommend to comment out the lines in job\_list instead of commenting out job\_list.conf-line.
