

Documentation on server_monitor

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

Is there any "official" documentation for the command server_monitor mentioned in some KB items?

Resolution:

The functionality "server_monitor" is not an "official" functionality open for customers. It is used in internal scripts in Aleph (e.g. UTIL W to monitor and stop server processes). Therefore no official documentation exists. In some KB-items the command "server_monitor" is used to stop server processes (e.g. before clear_vir01).

Following there is an explanation of the parameters in this command:

t -> Type: For example "server_monitor -tks WWW" stops all WWW-server-processes.

When not using parameter type (server_monitor -ks) all server processes will be stopped.

k -> "kill-mode": Processes are stopped. If server_monitor is called up without option k the running server processes will be displayed on screen.

s -> "silent-mode": There will be no output or confirmation prompt on the screen.

The command server_monitor is only dealing with server processes (that are started with UTIL W 3). The command does not deal with daemons, batch queue, jobd...
