

p_item_12 results in two error messages

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 19.01
-

Description:

Problem Description:

Running p_item_12 at site with large number of Z30 records resulted in two error messages and no output, Z100 status remains at running not error

Actual Results:

Execution error : file '/exlibris/aleph/a20_1/aleph/exe/b_item_12_a.gnt'
error code: 200, pc=0, call=1, seg=0
200 Run-Time System internal logic error (in rtsvarea.c:11.11, line 617)

alloc error: io_buf_form : size : 2000

Expected Results:

Job runs to completion without errors and correctly updates Z100. If the job does fail with errors then Z100 is updated appropriately.

Alternatively there is some way to limit the number of records processed so that the allocation error doesn't happen.

Resolution:

Fixed in v20. rc 3166.
