

## COBOL compiler: can not create temporary directory

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

After official approval Ex Libris has provided us with a hotfix that we now want to install on our server.  
But compiling the COBOL-source does not work:

```
m201@exlibris/aleph/a20_1/alephm/source/com> iprou com edit_lkr_text
cob: can not create temporary directory /tmp?3?/cob1651
iprou: com edit_lkr_text
mv: cannot access edit_lkr_text.gnt
```

### Resolution:

Changing this line in \$alephm\_proc/aleph\_cobopt has solved the problem:  
set TMPDIR=/exlibris/tmp
