

Course Reserve Browse indexes not working

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

The Course Reserves Browse functionality is not working, at least not for all the browse indexes:

Browse indexes that are NOT working:

"Instructor"
"Course name"
"Department"
"Title"
"Authors"

Browse indexes that appear to be working:

"Course number"
"Word index"

Do we have to run another indexing service to fix the ones that are NOT working?

Resolution:

It's unclear to me if you are talking about Test or Prod. Please specify which in any communication.

Test has 0 z01's (Browse headings); Prod has 1.

Tim H. didn't say anything about the Browse. The search he complained about was a word search ("WIN"). I gave him the solution for that.

To build the Browse headings you need to run p_manage_02 (in sbs30).
