## Problems when selecting items with checkboxes on Brief Display page

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

When selecting items to save to a file or email from the Brief Display page, Aleph does not remember that I have those boxes checked when I click the Save/Email option or the Add to MyShelf (Bookbag). I get the error message 'Cannot "Add to bookbag" because no records were selected.'

If I do a "select all", the items will be remembered and processed properly. If I do the "select all", then deselect any of the items, and proceed, it saves all the records, including the ones I deselected.

### Resolution:

I found the problem here in the file short-select-include. We had "imd.src = loc:" with a colon instead of "imd.src = loc;" with a semi-colon.
