
p_manage_70: "Error reading order"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We are trying to use the p-manage-70 service to convert order numbers to bib numbers and are getting the following errors:

Error reading order. Skipping line: 42823SCS50 SCS50

Error reading order. Skipping line: 42824SCS50 SCS50

Error reading order. Skipping line: 42841SCS50 SCS50

Error reading order. Skipping line: 42995SCS50 SCS50

Resolution:

Looking at the b_manage_70_order_to_bib program, when ORDER to BIB is specified, p_manage_70 expects input records in the following format:

02 REC-IN-DOC-NUMBER PICTURE 9(9).

02 REC-IN-SEQUENCE PICTURE 9(5).

02 REC-IN-LIBRARY PICTURE X(5).

Note: the SEQUENCE is the Z68-SEQUENCE (the last five digits of the z68_rec_key).

Thus, a sample input record would be: 0000001800001USM50
