
PDS Remote Login Configuration

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 3
-

Description:

We use remote login in PDS. Users on the network can access MetaLib as an affiliated guest, but when they login they get a white screen.

Resolution:

The documentation states that the order of the parameters in the redirect file for remote login should be

```
"pds_handle=$0100&"+
```

```
"calling_system=$0200&"+
```

```
"institute=$0300&"+
```

```
"url=$0400";
```

and not

```
"calling_system=$0100&"+
```

```
"institute=$0200&"+
```

```
"pds_handle=$0300&"+
```

```
"url=$0400";
```

Please check if the order of the parameters is correct as this is most likely the source of the problem.

Additional Information

Remote Login
