
last-bor-id should come from ADM library rather than \$usr_library

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

- v. 16/17 is getting the last-bor-id from the \$usr_library z52.
- Our multi-ADM customers want and need for this to come from the ADM library.
- The ADM last-bor-id can have a distinct prefix for the library and the patron ID created from it will

Resolution:

last-bor-id is taken from usr_library so that it will be kept unique. The system architecture is built that way and it cannot be changed to the configuration you have requested

Additional Information

last-bor-id, usr_library, multi-ADM, patron ID
