
Question regarding Z39.50 resources and searching via a proxy server

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 4
-

Description:

The HTTP resources are searching properly through the proxy server however, I cannot get my Z39.50 resources to search through the proxy server.

I do have the proxy server configuration set properly, and my HTTP resources are able to go through it, but others won't.

I'm wondering if this has anything to do with the resources being Z39.50?

Is this mentioned in the documentation somewhere?

Resolution:

On page 27 of the METALIB VERSION 4.1.X System Configuration Guide: "The use of the search proxy server in MetaLib is supported for the HTTP based resources only."
