Description:

Is it possible to set up multiple Administrative libraries with single Bib library? If so, what and where the document I can follow?

Resolution:

Certainly it is possible to have multiple ADM libraries with a single bib library.

I assume that you are asking this because you have found that some branch library can not be handled properly within the existing ABC50 ADM(?)

To create a new ADM library -- or a new any-type-of-library -- you need to follow the steps in the How To Open a New Library document, available on the Doc Portal.

You may also want to search on the term "multi-adm" in the Knowledge Base. I would suggest the following KB records in particular:

8192-4632
8192-3737
16384-34
8192-7625
5740
