
Gateway IPs (from Boston/Israel) for access to customer servers

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 4
-

Description:

I'm trying to make sure we have the right IPs for allowing the exlibris user to access our MetaLib, SFX and Verde servers. Could you send me the complete list?

I suspect some email went out with the current information at the last time of the change, but it would be really useful to have a Knowledge Base entry with this information as well.

Resolution:

Below is a list of IPs/Ports for SFX/Metalib/Verde that should be open on your servers:

Outgoing FTP access is enabled for the following addresses:

<ftp.exlibris.co.il>

<ftp.exlibrisgroup.com>

<ftp.exlibris-usa.com>

Standard port(s) for outgoing mail server; mail daemon installed

Confirm that the following IPs are accessible:

Des Plaines firewall: 207.56.64.194

Boston firewall:

Moving ISP on June 30/July 1 2011

Please add both addresses to your firewall until the change

72.164.6.114 (Before and on June 30, 2011)

12.21.149.130 (July 1, 2011 and after)

Conventional servers' Metalib ports are open:

- WWW server (Web) 4331
- Z39.50 server port 9331
- Z39.50 gate port 7331
- PDS_PORT port 8331
- PDS_PORT_IN port 8331
- HTTPD/Apache port 8331

Conventional servers' SFX ports are open:

- HTTPD/Apache port 80 or 3210

Conventional servers' Verde ports are open:

- HTTP port 18080 [installation/implementation]

For interoperability between Verde and SFX:

- Port 1521 on the Verde server must be open for access from the SFX server
- Port 18080 on the Verde must be open for http access from the SFX server

For interoperability between Verde and ALEPH:

- ALEPH PC_server (6991) and WWW_server (4991) ports must be open for access from the Verde server
- Verde port 18080 must be open for access from the ALEPH server
