
Formatting Bibliographic Information on ILL Pick Slip

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

Currently in `www-ill-in-print-01.xml` we are using `<xsl:call-template name="bib-info-hdr"/>` to get the bibliographic information (including serial information: volume, issue, pages) to print. Our ILL staff would like more control over the placement of elements on the form.

How can this be done?

Resolution:

The values for `bib-info` and their display are controlled in `dt / edit_paragraph.eng` in the section 111 (BIB for ill request letter).

Additional Information

`www-ill-in-print.xml`, `bib-info-hdr`, bibliographic information, `edit_paragraph`
