

Report of titles in a collection

- **Article Type:** General

Description:

Our university insurance company wants a list of titles held in each of our rare book collections.

I see reports by item status but can't find any report that will list all of the titles in a certain collection.

For example, I need Z30 collection "MDR" and at minimum author/title information sorted in some reasonable way.

Resolution:

Since you have a WCO Word index built on the Collection field, you can do a wco = mdr search in either the Web OPAC or the GUI Search and save the results to the server. Or you could run p_ret_03, specifying wco = mdr as the Common Command Language phrase.

Once you have the output file from this search or job in the \$alephe_scratch directory, you can use it as input to whichever p_print job best meets your needs. See Knowledge Base record 8192-681 for a complete description of print jobs.

If you don't like the way the output is sorted, you can input the file to the p_ret_21 ("Sort Catalog Records") job, and then use *that* job's output as input to the p_print_0x job.
