

## LOCATE" Doc Validation Errors

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

We get "LOCATE" Doc Validation Errors such as:

Document is duplicate in the database (Matched against System No.... by LOCATE command)

More than 5 documents were detected as a possible match by LOCATE command

What does this mean?

### Resolution:

These messages are, respectively, 0121 and 0123 in the \$alephe\_error\_eng/check\_doc file. You could change the text there, if you like.

To prevent these checks from being performed, remove the "check\_doc\_locate" from column 2 of the ./xxx01/tab/check\_doc for each relevant check type.

---

## Additional Information

Locate, records validation
