
After tab22 edit ARC ETL isn't passing changes

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 19.01

Description:

Trying to pull additional bib fields into ARC for display purposes. I've edited Tab22 in AER01 (see attached Word file). I restart the PC server, then wait for the ARC ETL to run at night. The incremental update has run without error every night (according to the ETL status report within ARC), but I'm not seeing the new fields in ARC. What did I miss?

Resolution:

run p_manage_07, not p_manage_35

Additional Information

p_manage_35 p-manage-35 manage_35 manage-35 p_manage_07 p-manage-07 manage_07
