

## imp\_demo\_libraries: "Export File usm01/files/exportSEQ.tar.gz Not Found".

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

I'm trying to run `imp_demo_libraries` (which calls `imp_current_library`) in v19. I get the message, "Export File usm01/files/exportSEQ.tar.gz Not Found ". And it's true: there is no `exportSEQ.tar.gz` file in -- in *\*any\** of the `USMnn/files` directories. Where are you supposed to get these demo library sequential files?

### Resolution:

The v19 installation places files with the name `usmnn.export.gz_aa` in the `$data_files` directory. The procedure which reads these files is `$aleph_proc/oracle_imp_demo_libs` -- which calls `oracle_imp_current_lib_a`. These are the procedures used in v19-up.

See KB 8192-6375 in regard to an alternate method of getting the demo library tables.
