-

Description:

Our SFX instance is working on port 80. For some reason, the full text button is not appearing.

Resolution:

The reason the full text button is not appearing is because until Service Pack 262, you had to specify port 80 in the configuration file when configuring your SFX instance. For example, specify the SFX URL in `./vir00/tab/tab_institute` as follows:

<http://sfxserver:80/sfxlcl3>

After Service Pack 262, it is not necessary to specify port 80 any longer.

Additional Information

Full Text button, SFX,
