

## Fine Receipt Error - XML/XSL Parser Error

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 17.01
- 

### Description:

In the Circulation GUI the following was done when a fine was to be paid:

1. Pay Sum was selected
2. The screen to print receipt did not come up and the following error was received:

"xmlxsl.err

Error on line 99 column 1 of file:/C:/AL500/alephcom/files/ABC50/PrintTemplates/eng/cash-pay-receipt-pay.xml: Error reported by XML parser: Content is not allowed in trailing section. Transformation failed: Failed to parse stylesheet"

This feature worked well until mid-morning today when this error occurred.

### Resolution:

It appears that the XML file that you sent, cash-pay-receipt-pay.xml, is not in proper format. The problem is that there is an illegal comment at the bottom of the file. It looks like this: "! modified 20070129". This comment needs to be removed before the receipts will work.

I suspect that the reason this worked until today is that Aleph automatically uploaded and installed a new version of the file as edited on 20070129. This file may have just been distributed today.
