

Default Users and Setting up QuickSets

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 4
-

Description:

Which institutional default users do I need for setting up library-defined QuickSets?

Resolution:

There are four basic types of default users that can be used to create Quick Sets (INST = your Institution name):

- 1) INST (where INST = the local institutional code as defined in vir00/tab/tab_institute) = for setting institution-wide default Quick Sets for all INST users
 - 2) INST-GUEST = for setting default Quick Sets for institution non-affiliated Guests (outside the network);
 - 3) INST-IN = for institution affiliated users (within the defined IP ranges)
 - 4) INST-<group> = for INST logged-in users belonging to a specific User Group
