## Non-filing Indicators Not Working for Browse Index

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

To search the OPAC for Course Reserve books, we need to add the definite articles (a, the, an, etc.) to search. For example, in the OPAC xxx30 library if you search for "Sociology of personality", there are no hits. If you search "The sociology of personality" the book is found.

### Resolution:

The `./xxx30/tab/tab11` entries for the TTL index correctly specify indicator 2 as a non-filing indicator, but the `./xxx30/tab/tab00.eng` column 5 specifies '01' as the filing routine to be used for the TTL index, while the `tab_filing` routine 01 does not include a line for "non\_filing".

Therefore, the `tab11` non-filing value is not going to be used. You need to change the `./xxx30/tab/tab00.eng` column 5 to '11'. (`tab_filing` routine '11' \*does\* include a `non_filing` line.)

And then re-run `p_manage_02` for the xxx30 library.

Running this for a Course Reserve library typically takes 5-10 minutes.
