
Slow response time accessing item records in GUI

- **Article Type:** General

Description:

We get extraordinarily slow response time when trying to retrieve high-numbered z30 records in the GUI Items client.

Resolution:

The problem was the z50 table in the JTS50 library. (The `./pc_item/pc_item_` calls the `./com_io/set_znn_time_stamp` program which reads the xxx50 z50 table.)

util a/17/14 for the z50 showed that the z50_id Oracle index was missing. And this SQL:

```
SQL-xxx50> select count(*) from z50;
```

showed that there were 7,128,127 z50 records! The z50 table is supposed to be cleared out nightly by util a/12.

Additional Information

response time, item records, GUI,
