
ACQ:line item search within purchase order does not find matches

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7.0.2
-

Description:

Bug Report Form for Issue 16384-5729

Module: Acquisitions

Release(s) replicated in: 7.0.4

Server Platform(s) affected: Solaris/all

PC O/S (if this is PC specific): n/a

Browser type & version (if WebVoyage): n/a

Expected Results: In a PO, the Line Item>Search option should retrieve the line item on the PO that meets the specified search criteria.

Actual Results: The PO Line Item>Search option always returns errors.

Even if you've supplied valid criteria, you'll always get a "no line items matched your search criteria" error. If you use the X button to close out the screen, you'll get a rte 9 and the client will shut down.

The same functionality works on Invoices (it correctly changes the text color of the line item in question).

Workflow Implications: The Find Line Items Under a Purchase Order functionality is unusable.

Replication steps:

Call up a PO and note valid criteria for one of the line items (let's say bib id).

Go to Line Item>Search and first select a Search By type of Bib Record Number, then select Equals as the condition, and supply the bib id and hit Search

? You'll get a message stating "no line items matched your search criteria error"

If you hit the X button here, you'll get a run time error 9 and the client will shut down.

Resolution:
