

Controlling the setup for multiple time zones

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

What controls the setup for multiple time zones?

Resolution:

A switch in tab100, TIMEZONE-ADJ, controls the setup for multiple time zones. The possible values are 0, + -. The plus sign adds one hour, the minus sign subtracts one hour.

Additional Information

setup, multiple time zones, tab10
