## aleph\_shutdown giving JBOSS errors

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

Shutting down JBOSS...

Exception in thread "main" javax.naming.CommunicationException: Could not obtain connection to any of these urls: 127.0.0.1:2891

at org.jnp.interfaces.NamingContext.checkRef(NamingContext.java:1198)

at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:516)

at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:509)

at javax.naming.InitialContext.lookup(InitialContext.java:347)

at org.jboss.Shutdown.main(Shutdown.java:188)

shutdown complete

### Resolution:

JBOSS is not started by aleph\_startup by default, that is why these errors appear during the shutdown. You can safely ignore them. If you wish to correct this problem, please comment out the following lines in \$aleph\_root/aleph\_shutdown:

```
# JBOSS shutdown
```

```
# echo "Shutting down JBOSS..."
```

```
# cd $aleph_dev/ng/aleph/home/system/bin
```

```
# grep shutdown.sh jboss_shutdown.sh | bash -s
```
