
p_publish_06: "Warning: cannot determine current directory"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We see the following occurrences of the message "Warning: cannot determine current directory" in running p_publish_06:

```
libprd-a20(1) >>grep 'cannot determine current directory' *publish*
abc01_p_publish_06.07294:Warning: cannot determine current directory
abc01_p_publish_06.07294:Warning: cannot determine current directory
abc01_p_publish_06.07299:Warning: cannot determine current directory
abc01_p_publish_06.07299:Warning: cannot determine current directory
abc01_p_publish_06.07300:Warning: cannot determine current directory
abc01_p_publish_06.07300:Warning: cannot determine current directory
abc01_p_publish_06.07302:Warning: cannot determine current directory
<etc.>
```

These began at a time when (unbeknownst to us): ue_21 was not running, no z00p's were being created or updated, and p_publish_06 had nothing to process.

But ue_21 *is* now running, creating/updating z00p's -- which p_publish_06 seems to be processing correctly despite these Warning's.

Resolution:

These messages disappeared after rebooting the server.
