Description:

In applying the V.18 updates (SP 2186) when I got to Item 002097 it was not clear to me what exactly I was to do. Unlike a lot of other changes, when I went to USM01/form_eng/ the target file had not been updated so I didn't have an example of how the change should be applied. Can someone provide me with some additional instruction, e.g., do the lines in the SP documentation z302-address-0 etc., replace the corresponding lines in the global.trn file or are they additional.

Resolution:

These lines replace those in your current versions. You should only have one instance of each tag. That is, only one line with z302-address-0 in column 1, only one line with z302-address-1 in column 1, etc.
