
Export - UTIL/A/19 and Job List

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

In preparation for doing an export from our (v17) PROD region using Util/A/19, we would like some further clarification.

1. Where is the location of \$data_files directory as indicated in the documentation as the location where the export file goes?

UTIL A/19 - EXPORT (Exports all library's Oracle tables into \$data_files/library-name.export.z)

2. We have named the STA libraries to be exported as below. Please confirm if this is accurate.

a.ABC01.export.z

b.ABC10.export.z

<etc.>

3. We would like to set up the Util/A19 in the job list. Is this feasible? We have a sample line for the procedure in the job list below. Please advise.

```
! 2 3 4 5 6 7
```

```
!!-!!!!!!!!-!-!!!!!!!!!!!!!!!!!!!!-!!!!-!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!-!!!!!!
```

```
!Export Util A/19
```

```
!00 19:00:00 Y ABC10 util_a_19 ABC10,abc10.export.z
```

Regards

Sharon [<Alan Manifold >]

Resolution:

1. The abc01 \$data_files directory is ./abc01/files/,
the abc10 \$data_files directory is ./abc10/files/, etc.

2. You don't "name the STA libraries to be exported". When you submit util a/19, it will write

abc01.export.gz_xx files to the abc01 \$data_files/,

abc10.export.gz_xx files to the abc10 \$data_files/, etc.

3. An entry in the job_list for util_a_19 would look like this:

```
00 19:00:00 Y ABC10 util_a_19_b ABC10
```
