
vxws:missing ISBN and ISSN in web service "SearchService"

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 8.2.0
-

Description:

Issue number: 16384-19073

Module: vxws

Server platform affected: Solaris

Releases replicated in: 8.1.1-8.1.2

Last version without bug: 8.1.0

Expected results:

SearchService should include ISBN and ISSN in results.

Actual results:

ISBN and ISSN are returned as `<search:isbn xsi:nil="true"/>` and `<search:issn xsi:nil="true"/>` for all records, no matter if the ISBN and ISSN are in the records or not.

Workflow implications: Anything that uses this service to pull the ISBN or ISSN does not work correctly.

Replication steps:

From this example URL: <http://10.100.3.44:10014/vxws/SearchService?searchCode=CALL&searchArg=PS21&browseFlag=Y>

Record that has an ISBN present though it does not display:

```
<search:result>
<search:bibId>39253</search:bibId>
<search:bibText1>Magill's survey of American literature / edited by Frank N. Magill.</search:bibText1>
<search:bibText2 />
<search:bibText3>1991</search:bibText3>
<search:callNumber>PS21 .M34 1991</search:callNumber>
<search:mfhdcCount xsi:nil="true" />
<search:itemCount xsi:nil="true" />
<search:itemStatusCode xsi:nil="true" />
<search:patronGroupCode xsi:nil="true" />
<search:locationName xsi:nil="true" />
<search:opacSuppressFlag xsi:nil="true" />
<search:relevanceRanking xsi:nil="true" />
<search:headingText xsi:nil="true" />
<search:headingType>Library of Congress</search:headingType>
<search:indexCode>U</search:indexCode>
<search:databaseCode xsi:nil="true" />
<search:elink xsi:nil="true" />
```

```
<search:elinkType xsi:nil="true" />
<search:isbn xsi:nil="true" />
<search:issn xsi:nil="true" />
<search:bibFormat xsi:nil="true" />
<search:patronFirstName xsi:nil="true" />
<search:patronLastName xsi:nil="true" />
</search:result>
```

Workaround: None

Resolution:
Fixed in 8.2.0.
