
How to skip the check of Operating System when installing SFX?

- **Article Type:** General
 - **Product:** SFX
 - **Product Version:** 3
-

Description:

I need to install a new installation of SFX on our in-house server. I have found the following error when trying to run the installation script.

...

Setup

[SFX Setup]

Installation directory: /exlibris/sfx_ver/sfx_version_3

Log file: /exlibris/sfx_ver/sfx_version_3/tmp/setup.log

[1] Operating System analysis.

This system information:

kernel:Linux

hardware:i686

version:#1 SMP Wed Nov 7 14:08:51 EST 2007

release:2.6.9-67.ELhugemem

hostname:wilma.exlibris.com.au

Data from /etc/redhat-release: Red Hat Enterprise Linux ES release 4 (Nahant Update 6)

Unsupported 'Nahant Update' version '6' for release 'ES 4' at [./setup.pl](#) line 495.

Sorry, this system is not supported.

ERROR: Setup failed

=====

What can we do?

Resolution:

1. Verify that the operating system you are installing on is supported according to the installation guide.
2. Run the installer program with the following syntax:

```
./sfx_version_3_<OS_NAME>_installer.run -- --skiposcheck
```

Additional Information

OS Nahant Update --skiposcheck installation
