## Blank line in plain XSL templates

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

In version 15.5, we have plain-\* notices set up for the text bodies of our Circulation notices to accompany the HTML attachments. For example, plain-loan-notice-letter.xsl governs the display of the courtesy notice. I would like to know how to do a blank line in these plain templates. For example, I have (myself) two DVDs due today, and when I got my notice, it came like this: Looney tunes[videorecording] /. [001291713] Description: pt.1-2 Barcode: 30502004723788 Sublibrary: Alcuin Collection: Media DVD Due Date: 11/17/2004 Looney tunes[videorecording] /. [001291713] Description: pt.3-4 Barcode: 30502004723846 Sublibrary: Alcuin Collection: Media DVD Due Date: 11/17/2004 Sincerely, Library Circulation

I'd like to put a blank line before the "Sincerely, Library Circulation", as well as a blank line in between the items. Anybody know how to do this? Thanks in advance! [Ver:15.2 ; 2004-11-20; ]

### Resolution:

[From Pam Sedgwick, University of Tennessee:]

This problem sounds familiar. I find this line in my "plain-overdue-summary-0.xsl": `<xsl:call-template name="blank-line"/>` at the very end of section-02. And since that line is NOT in the html template for that form (overdue-summary-0.xsl), I assume I added it to fix the spacing in the plain template. (I edited our templates a year ago.);

[From Amber J. Meryman, Butler University Libraries:]

To All - You can also just use this: `&#10;` which acts just like the double pound sign (;) in the normal templates. This has an advantage because you can use it in-text. We have our sign-off set like this: `<xsl:with-param name="line" select="&#10;From, &#10;Circulation Department"/>`
