## how to use the op=login operation in the x-server

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 17.01
- 

### Description:

There is not documentation on how to embed the authentication string with another x-service operation (I'm interested in using this with ill-build-loan. Or, do you first authenticate to get a session id, and then pass the session id back through with additional requests?

### Resolution:

The syntax is:

<http://server> ip:8992/X?op=ill-build-

loan&library=xxx50&doc\_number=006742366&item\_seq=000010&bor\_id=ID11111&staff\_id=aaaa&?op=login&library=xxx50&user\_n

---

## Additional Information

user authentication, x-server
