Description:

MetaLib KB Known Issues as of May 29th, 2007

Resolution:

Dear customers,

We would like to notify you about some known issues in the MetaLib KB that we are currently dealing with:

- 1) A reminder: as of late in 2006, RDN databases are no longer available. Their content now resides on Intute's z39.50 server. A table mapping old RDN databases to the appropriate Intute databases is attached to the CKB release notes.
- 2) The new PROLA configuration (CKB02830) requires IP authentication even though it is a free resource. The release notes have been updated to reflect that.
- 3) SwetsWise (CKB02385) have changed their Hostname:Port to: z3950.swetswise.com:210. We are still trying to figure out a Link to Records in the Native Interface, but we are not sure that we will come up with one that will work.
- 4) The new MetaPress (CKB02522) and SpringerLink (CKB02523) WEBCONFIG_XML configurations require IP authentication. To obtain such authentication, please contact MetaPress' Heather Klusendorf at HeatherKlusendorf@metapress.com
- 5) Archivio DoGi (CKB02921)'s XML gateway is currently down. We are awaiting an answer from the Italian vendor Infoleges regarding configuring their version of Archivio DoGi as a CKB resource instead.
