## PDS login uses ALEPH profile and not parton specific profile

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

**Problem Description:**When a patron with a specific profile and base (not the ALEPH profile) logs in using PDS to the web OPAC, the displayed pages are still those of the default ALEPH profile and not the ones with an extension of the base name.

**Actual Results:**Patron with profile TPROF and base TBASE logs in using PDS to the web OPAC. He receives the header head-1-bor-usm01 all though there exist a header with a tbase extension called head-1-bor-t-tbase that should be used by the system.

**Expected Results:**Patron with profile TPROF and base TBASE logs in using PDS to the web OPAC. He should receive the header with the extension tbase if it exists.

### Resolution:

According to Development, the problem reported has been fixed in v.20 by rep change 3210.
