Can We Use Different Claim Letters, such as serial-claim-letter-01-NN?

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

Description:
I've created new text for some serial claims letters using form serial-claim-letter-(01, 02,or 03)-08.
The new form is not being used by the system. Why?

Resolution:
The documentation is easy to misunderstand, since in the User's Guide, Serials, p 54, one finds the following information:
Claim Letter (GUI)
serial-claim-letter-
01-04.xsl

The valid format for this letter is "serial-claim-letter-nn" where "nn" can have the values of "01", "02", "03", or "04". "serial-claim-letter-01-04" or "serial-claim-letter-nn-nn" is not a valid format.
I checked v18, also and the answer is the same there, too.

ON the other hand, there are other methods of specifying a form version:

[1] specify in serial-claim-letter-01.trn by a field that appears in <section-01> of the the XML, for example, z30-sub-library:
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!-!!!!!!!!!!-!-!!!!!!!!!!!!!!!!!!!!->
form-print-format z30-sub-library MED 09
will print the serial-claim-letter-01-09.xsl form for forms where z30-sub-library = MED.

[2] less interesting, but nice to know: on a specific computer you can control what form prints using the print.ini file:
ClaimLetter 08 Y B claimltr.prn
will print the serial-claim-letter-01-08.xsl form.
