

Course Reserves z69: "table or view does not exist"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

I am trying to extract data from z69 table from our Course Reserves library (abc30).

I have used util a to drop and rebuild the abc30 z69 table. When I run my report to extract any data, I get the error:

from z69

*

ERROR at line 2:

ORA-00942: table or view does not exist

Resolution:

The z69 table was not being created because, in doing the util a/17/1, rather than replying with "yes" to the "...z69 enter yes to DROP z69 table", the customer was replying with "y".
