
Serial patterns 853/853X with special characters

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

when an 853 template (stored in the pc_tab/catalog) contains special characters, (see example in the attachment) and such template is opened in the Serials module using Template button, special characters are not populated properly to the editing form. Also they cannot be seen properly in the preview of templates when deciding about the right template. Why?

Resolution:

The fields of the form in the Acq/Serials (used for placing the pattern's caption) are not supporting special characters.

Additional Information

unicode, special characters, pattern, caption with special character
