
p_file_06 not populating z30_description of "mixed material" items

- **Article Type:** General

-

Description:

We previously used p_file_06 to load items with a blank z30_description. The job populated the z30_description with a value based on the HOL 853, etc.

Now I am loading a different set of items and the z30_description is *not* being populated in this fashion.

Note: Each item has a z30_hol_doc_number linking it to an HOL record with appropriate 853/853X fields.

Resolution:

I see (looking with util f/3/6) that the items you tried to load have z30_material "MIXED".

The first lines in the correct_z30_b program which populates the z30_description are these:

```
IF Z30-MATERIAL (1: 3) NOT = "ISS" OR  
Z30-DESCRIPTION NOT = SPACES  
THEN  
GO TO EX-CORRECT-Z30-B  
END-IF.
```

That is, the z30_material must be ISSUE, ISSBD, etc.

Could possibly specify a z30_material of "ISSMX" for these items?
