Description:

Question:

The version 18 GUI contains a directory ..\alephcom\bin and a directory ..\alephcom\bin_v.

Directory bin_v is for Windows Vista.

The directories contain (among other things) a HTMLPrint.exe and a HTMLPrint.ini.

In bin_v, the HTMLPrint Tool has version 5.21.

In bin, the HTMLPrint Tool has version 4.19b.

Are customers with Windows XP PCs allowed to take the HTMLPrint.exe from bin_v and use it?

Or must they use HTMLPrint Tool version 4.19b from the bin directory?

They would want to take the HTMLPrint.exe from bin_v because it is a more advanced version than the one in bin.

Resolution:

Yes, they can. HTMLPrint version 5.21 supports Vista and other platforms, version 4.19b doesn't support Vista.

They can copy HTMLPrint.exe AND HTMLPrint.ini from

Bin_v to Bin. Don't forget HTMLPrint.ini!

Additional Information

Windows Vista, bin_v, HTMLPrint.ini, HTMLPrint.exe
