
Problem with Label Data File - tab-label-01 Empty

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

We have a number of different collections. When an item's collection is "Botany", the <tab-label-01> in the XML/XSL data file for printing a spine label contains the word "Botany". When the item's collection is "Entomology", the XML/XSL data file <tab-label-01> field is blank. As a result, the spine label produced for the Entomology journal is lacking the collection (<tab-label-01>) line.

Resolution:

The collection in question, Entomology, has not been added to the table tab_label.eng. Adding it in solves the problem.
